## EXPERIMENT

Title

MISSING ALPHABETS

Description

Pangram is a sentence containing every letter in the English alphabet. Given a string, find all characters that are missing from the string, Le., the characters that can make the string a Pangram We need to print output in alphabetic order.

For example,

Input: welcome to geeksforgeeks

Output: abdhijnpqvxyz

Source Code:

```
def find_missing_pangram_chars(s):
    s=s.lower
    all_chars = set('abcdefghijklmnopqrstuvwxyz')
    present_chars = set(s)
    missing_chars = sorted(all_chars - present_chars)
    return ''.join(missing_chars)

#input_string = input("Enter the string:")
missing_chars = find_missing_pangram_chars(input_string)
print(f"Missing characters:{missing_chars}")
```

## RESULT
